

# NAVIGATOR™ HDD SIMULATOR

## HORIZONTAL DIRECTIONAL DRILL

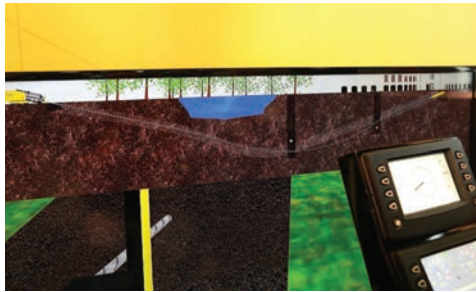

**AUTHENTIC OPERATOR'S STATION.** The operator's station on the Vermeer Navigator HDD simulator features simplified, common controls and an authentic Navigator® HDD drill seat. Additionally, it provides a great operator-friendly workstation layout for full, dual-screen viewing.

**COMMON CAN CONTROLS.** The Vermeer Navigator HDD simulator features controls that are the same across our Navigator HDD lineup so you can more easily transition from the simulator to a drill.

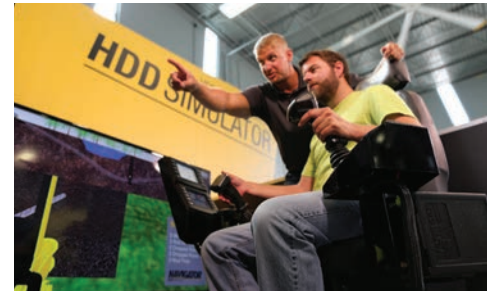

**VIRTUAL DRILLING, HANDS-ON TRAINING.** Help your new crew members take the next step in becoming a drill operator. Get realistic, hands-on training of basic drill functions and the concept of drilling before ever sitting on a real drill.

**CROSS SECTION OF BORE PATH.** View your actual drilling path on screen in real-time compared to the bore path planned within the program.

**REAL-TIME FEEDBACK.** Receive real-time, on-screen feedback on your drilling techniques. Get scored on missed grease, mud flow, dropped rods, makeup torque and more.

**TRAIN OPERATORS IN CONTROLLED ENVIRONMENT.** Minimize risk of damaging equipment or existing utilities by training new operators with a simulator before getting on a drill. Using the simulator, the operator has the ability to experience certain replicated drill operations assisting in reducing actual on-drill training time.
